

SHUBHAM KHARCHE

QA Automation Engineer

□ Pune, Maharashtra | 7559162322 | ✉ shubhamkharche38@gmail.com

PROFESSIONAL SUMMARY

- ▶ QA Automation Engineer (ISTQB CTFL Certified) with 4 years of experience in Manual and Automation Testing of web-based enterprise applications.
- ▶ Hands-on expertise in Playwright (TypeScript), Selenium WebDriver (Java) with POM architecture - building scalable, maintainable automation frameworks for enterprise web apps.
- ▶ Proficient in CI/CD integration via GitHub Actions, Grafana monitoring dashboards, and AI-assisted test scripting using GitHub Copilot and Claude Code.
- ▶ Strong experience in Functional, Regression, API, Database, SIT, UAT, and Production Validation testing across Agile Scrum environments.
- ▶ Experienced in API Testing with Postman & Swagger, backend validation with SQL (MySQL, PostgreSQL, MS SQL Server), and cross-browser parallel execution.

TECHNICAL SKILLS

Automation Skills	Playwright (TypeScript) · Selenium WebDriver · GitHub Actions (CI/CD) · GitHub / Git · GitHub Copilot · AI-Assisted Testing
AI & GenAI Tools	Claude Code · GitHub Copilot · AI-Assisted Testing · LLMs · LangChain · Workflow Automation · MCP Servers
Testing Skills	Functional · Regression · Smoke & Sanity · SIT · UAT · API Testing · Database Testing · Cross-Browser · Parallel Execution · Production Validation
API & Backend	Postman · Swagger · REST APIs · JSON Validation · MySQL · PostgreSQL · MS SQL Server
Frameworks	Page Object Model (POM) · Hybrid Framework · Data-Driven Framework · Reusable Fixtures & Hooks
Languages	TypeScript · JavaScript · Java
Monitoring & PM	Grafana Dashboards · JIRA · MantisBT · Agile Scrum
Platforms	Windows · Ubuntu · Android · iOS (Mobile Testing)

WORK EXPERIENCE

Shaurya Technosoft Pvt. Ltd. Pune
Software Tester

Jul 2022 – Present

- ▶ Working on Playwright automation using TypeScript with Page Object Model (POM) structure for enterprise web applications.
- ▶ Automated regression, functional, end-to-end, and integration test scenarios for different business modules.
- ▶ Created reusable fixtures, hooks, utility functions, and browser context handling to make the framework easier to maintain.
- ▶ Improved regression execution time by running tests in parallel and across multiple browsers.
- ▶ Performed API testing using Postman and validated backend data using MySQL, PostgreSQL, and MS SQL Server.
- ▶ Integrated automation suites with GitHub Actions for scheduled and release-based execution.
- ▶ Built Grafana dashboards to monitor automation runs, execution trends, and failure reports.
- ▶ Analyzed failed test cases using logs, screenshots, and execution reports for faster debugging.
- ▶ Worked closely with developers, QA team members, and business analysts during sprint cycles and release activities.

KEY PROJECTS

Project 1: ERP System & e-Commerce

ERP-based dairy management platform covering inventory, order processing, customer management, billing, logistics, and reporting workflows.

Tech Stack: Playwright · TypeScript · Postman · GitHub Actions · GitHub Copilot

Roles & Responsibilities

- ▶ Developed a scalable Playwright automation framework with reusable POM components and shared utilities.
- ▶ Automated critical ERP workflows across inventory, billing, logistics, and reporting modules.
- ▶ Implemented fixtures, hooks, and browser context management to improve execution reliability and maintainability.
- ▶ Enabled automated regression execution through GitHub Actions and integrated reporting dashboards using Grafana.
- ▶ Performed API, database, functional, and end-to-end validation across business-critical workflows.
- ▶ Utilized GitHub Copilot to accelerate test script development and test data preparation.
- ▶ Participated in defect tracking, release verification, and production readiness activities.

Key Achievements

- ▶ Reduced regression execution time through parallel test execution.
- ▶ Improved framework stability with optimized locators and reusable automation components.
- ▶ Increased release confidence through automated CI/CD-based validation pipelines.

Project 2: Fleet Management System

Fleet management and logistics tracking application for vehicle monitoring, trip management, route tracking, maintenance scheduling, and operational reporting.

Tech Stack: Selenium · Java · Postman · GitHub Actions

Roles & Responsibilities

- ▶ Created automated test suites for vehicle tracking, route management, maintenance scheduling, and operational reporting workflows.
- ▶ Implemented cross-browser execution strategies to improve test coverage across multiple environments.
- ▶ Conducted smoke, regression, API, and database testing for frontend and backend validation.
- ▶ Enhanced debugging efficiency by capturing execution logs, screenshots, and failure evidence during automation runs.
- ▶ Worked closely with developers and business teams to validate fixes and support production deployments.

Key Achievements

- ▶ Expanded automation coverage using modular and reusable Selenium components.
- ▶ Reduced repetitive manual testing efforts by automating core logistics workflows.
- ▶ Streamlined release cycles through automated validation integrated with CI/CD pipelines.

CERTIFICATION & ACHIEVEMENTS

ISTQB CTFL 4.0 - Certified Tester Foundation Level

Hackathon 2025 - Team Leader & Prize Winner

Microsoft Learn Certifications

- Building Applications with GitHub Copilot Agent Mode
- Introduction to DevOps
- Introduction to Generative AI and Agents

EDUCATION

B.E. Mechanical Engineering

Savitribai Phule Pune University, Pune, Maharashtra

2019
